

## Installing and Using LinQ Software

Use LinQ™ software to easily display the desktop of any networked computer – even those using a wireless connection – on a SMART interactive product. You can go into your next meeting and link your laptop to the interactive product without fumbling with additional cables or hardware.

### Getting started

To use LinQ software, each computer you wish to display (share) and the computer attached to the SMART interactive product must be connected to the same network. LinQ software must be installed on each computer you wish to share. The Mobile Device Manager, which is automatically installed with SMART Board™ software 9.7, must be running on the computer attached to the SMART interactive product.

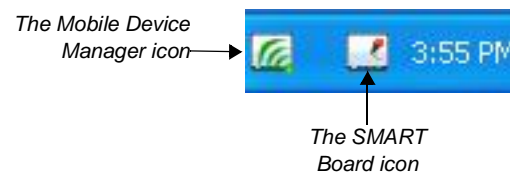

### To install LinQ software

- 1 Go to [www.smarttech.com/support/LinQ](http://www.smarttech.com/support/LinQ) and download LinQ software 1.2
- 2 When the download is complete, open the file to launch the InstallShield Wizard, and follow the on-screen instructions to complete the installation

### To start the Mobile Device Manager from the SMART interactive product

Look for the Mobile Device Manager icon in the notification area at the bottom-right corner of the screen. If you do not see the icon, follow these steps to launch the Mobile Device Manager:

- 1 Press the **SMART Board** icon in the notification area
- 2 Select **Control Panel**
- 3 Select **Mobile and Wireless Device Settings**
- 4 Select the **Start the Mobile Device Manager** check box. Modify the settings in this dialog box to suit your needs.
- 5 Press **OK**

The SMART interactive product is now ready to be linked to other computers.

## Using LinQ software

Up to five computers running LinQ software can connect to the SMART interactive product at the same time. Only one of these computers can be shared with the interactive product at any time. When they are connected, either the shared computer or the interactive screen can be used to control the shared desktop, but not both at the same time.

## Sharing your desktop

- 1 Select **Start > Programs > LinQ > LinQ Software**
- 2 Select your SMART product from the drop-down menu, and press **Connect**

**NOTE:** If you don't see your interactive product in the SMART Product Name list, verify that you have started the Mobile Device Manager on the interactive product, and then press the **Refresh Product Names** button  to reload the list.

- 3 The *LinQ Software* dialog box will appear. Press the **Share Desktop** button to display your desktop on the interactive product.
- 4 To stop sharing your desktop, press the **Stop Sharing** button

## Controlling shared desktops from the SMART interactive product

Anything you can normally do from the shared computer, you can do from the SMART product.

A menu appears at the top of the screen when someone is sharing his desktop. Use this menu to change settings when working with LinQ software.
