INSPIRE AMAZING IN YOUR CLASSROOM

SMART amp
collaborative learning software

Easily bring people, student devices and learning environments together

As mobile devices become increasingly popular in classrooms around the world, educators are looking for ways to overcome some of the challenges these technologies present to unlock their true potential.

Created with the input of teachers from around the world, SMART amp is designed for the pedagogical needs of today's classrooms. It provides a way to connect mobile devices without the need to install, update or maintain a variety of applications across different hardware and software platforms. This powerful cloud-based software allows you to unlock the power of collaboration and inspire amazing in your classroom.

True collaboration

Collaboration on mobile devices should be about more than just screen sharing. SMART amp enables students and teachers to work together in real time to solve problems and understand concepts in huge shared workspaces, easily building on existing ideas and creating new thinking.

An open forum for content

Explore and build content without switching between applications. The collaborative workspace serves as a platform where students can gather, create and consume content while easily sharing it across devices. Leverage existing SMART Notebook software files or content from other leading educational publishers.

Formative assessment

Gauge student progress exactly when you need to with embedded formative assessment tools. It's easy to get an accurate picture of how well students are following lesson material and adjust instruction accordingly, without interrupting the lesson activity.

Easy to integrate

Built on the Google platform, SMART amp doesn't require you to remember yet another password or spend time transferring files. Sign on with your Google ID, store your files in Google Drive and spend your time focusing on learning, not administration.

Classroom management

Switch effortlessly between whole class, small group and individual learning with easy file sharing and student grouping for project-based exercises. You can control who can edit a document, have the class follow along with a lesson or show examples of great student work on the fly.
