Serial number: ____________________________________________

Date of purchase: __________________________________________

FCC warning
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio and television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures.
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

User installer caution: Your authority to operate this FCC verified equipment could be voided if you make changes or modifications not expressly approved by the party responsible for compliance to Part 15 of the FCC rules.

Trademark notice

Important information

**WARNING**

- Failure to follow the installation instructions shipped with your SMART product could result in personal injury and damage to the product.
- Ensure that any cables extending across the floor to your SMART product are properly bundled and marked to avoid a trip hazard.
- Do not push foreign objects into the openings on your SMART product.
- Do not open or disassemble the SMART product. You risk electrical shock from the high voltage inside the casing. Opening the casing also voids your warranty.
- The camera arm on your SMART product has joints that present a pinch hazard when you move the camera arm. Keep clear of the pinch points.
- Do not stare into the lamp or shine the lamp directly into someone’s eyes. Turn off the lamp when displaying or capturing images of people.
- Do not overload power outlets or extension cords as this can result in a fire or electric shock.
- Turn off and disconnect your SMART product before a thunderstorm. During a thunderstorm, do not touch your SMART product or the power plug, because there is a risk of electrical shock.
- To reduce the risk of fire or electric shock, do not expose the SMART product to rain or moisture.

**CAUTION**

- Place your SMART product on a solid surface to prevent it from falling.
- If you have a security cable attached to your SMART product, do not carry or swing your SMART product by the security cable.
- Do not connect non-shielded interface cables to your SMART product and do not leave cables connected to unused connectors, because this can cause interference levels that exceed FCC regulations.
- Avoid setting up and using the SMART product in an area with excessive levels of dust, humidity and smoke.
• Do not block or cover the openings or slots on your SMART product. These slots provide ventilation, ensure reliable operation and protect your SMART product from overheating.

• Do not carry your SMART product by the camera arm. Carry it by the base of the unit.

• Disconnect your SMART product from the power outlet before cleaning it. Use a clean damp cloth and do not use liquid or aerosol cleaners or solvents when cleaning your SMART product.

• Only use your SMART product with the type of power source that is written on the power supply and do not modify the plug.

• Do not aim the camera lens at the sun.

• If your SMART product requires replacement parts, make sure the service technician uses replacement parts specified by SMART Technologies or parts with the same characteristics as the original.

Your SMART Document Camera™ 330 enables you to display 3D objects, printed documents and microscope slides on your computer, projector or television. You can capture images and save them to a SMART Notebook™ collaborative learning software file or to an SD or SDHC memory card.

Your document camera integrates with SMART Notebook software and SMART Board® interactive whiteboards, creating an interactive presentation environment.

If you have a mixed reality cube and SMART Notebook software 10.8 or later, you can use the cube with your document camera to manipulate 3D models in SMART Notebook files.
Document camera features

Camera
- High resolution 1.3 MP CMOS sensor
- 5.2× optical zoom, 8× digital zoom
- Up to 30 frames per second
- Automatic or manual focus
- Microscope mode that doesn’t require adapters

Output
- SXGA, WXGA, 720p or XGA resolution
- DVI-D output

Physical construction
- Security lock slot
- Collapsible design for easy transport and storage
- Bright LED camera lamp

Software
- SMART Notebook software, including SMART Notebook 3D Tools and Mixed Reality Tools software
- SMART Product Drivers
- Image Mate® software

Image storage
- Supports memory cards with a built-in SD slot
- Supports USB memory sticks with a built-in USB hub
- Supports image storage on connected computer
Document camera views

Your document camera has three views you can use to control how it sends data to a computer, projector or television.

- Computer view displays images from your document camera in a SMART Notebook file on your computer.
- Camera view controls your document camera from the camera's control panel and displays images on a projector or television. You can also view images through SMART Notebook software.
- SD Card view controls your document camera from the camera’s control panel and displays images from a memory card on a connected projector or television.

See Understanding Computer, Camera and SD Card views on page 19 for more information on these views.

Parts of the document camera

Adjustable camera arm and camera head

You can unfold and adjust the camera arm. You can also rotate the camera head to display objects at a range of angles. The camera head has a zoom dial, an auto focus button and an LED light with a light switch.
**Control panel**

You can use the control panel to switch between Computer, Camera and SD Card view, capture an image to a memory card and adjust brightness settings. You can also use it to control features and settings in the Camera view or the SD Card view’s on-screen display menu.

![Control panel diagram](image)

**NOTE**

On some cameras, Camera view is represented by a symbol.

For information on views, see *Understanding Computer, Camera and SD Card views* on page 19.

**Rear connection panel**

The rear connection panel has 12V DC, DVI-D Out, VGA Out, VGA In, Composite video out and USB-B connectors.
Side connection panel
The side connection panel has a security lock slot, an SD or SDHC memory card slot, a USB-A connector, a switch for selecting VGA DVI-D or composite video output, and a switch to select either SXGA, WXGA, 720p or XGA resolution.

NTSC/PAL switch
The NTSC/PAL switch is on the bottom of your document camera. This switch enables you to change the format of composite video output for your television. See Switching between NTSC and PAL on page 15.

Mixed reality cube

Power supply
Your document camera comes with a power supply and a country-specific power cable.

USB cable
Use the USB cable to connect your document camera to your computer. You can display objects, capture images to SMART Notebook files and control your document camera from SMART Notebook software.

**VGA cable**

Use the VGA cable to connect your document camera to a projector or display. You can display objects, capture images to a memory card and use the features in the on-screen display menus.

**Anti-glare sheet**

Place the anti-glare sheet over printed documents to reduce glare.

**Document camera software**

Your document camera includes software downloads that will help you present images from your document camera.

**SMART Notebook software and SMART Product Drivers**

Your document camera uses SMART Notebook software and SMART Product Drivers. SMART Notebook software is presentation software designed to work with SMART Document Cameras and the touch features of SMART Board interactive whiteboards. In addition, if you have a mixed reality cube, you can manipulate 3D models in SMART Notebook files using Mixed Reality Tools (see Using SMART Notebook 3D Tools and Mixed Reality Tools on page 51).

You can download SMART Notebook software and SMART Product Drivers at [smarttech.com/software](https://smarttech.com/software).

You can find system requirements for your computer in the SMART Notebook software 10.8 release notes ([smarttech.com/kb/158853](https://smarttech.com/kb/158853)).

**IMPORTANT**

You need SMART Notebook software 10.8 or later to use SMART Notebook 3D Tools and Mixed Reality Tools.
Image Mate software (Windows only)
You can use your document camera with Image Mate software. Visit the SMART download page at smarttech.com/software to download Image Mate software.

Downloading software ....................................................................................................... 15
Activating SMART Notebook 3D Tools and Mixed Reality Tools .................................... 16

Basic connection
Connect your SMART Document Camera to a power supply and your computer to use your document camera with SMART Notebook software.

**IMPORTANT**
This configuration requires SMART Notebook software. To use Camera view or SD Card view, connect your document camera directly to an external display.
CHAPTER 2
Setting up your SMART Document Camera

To connect the power supply

1. Connect the power supply cable to the **12V DC** receptacle on the rear connection panel.

![Diagram of power supply connection]

⚠️ CAUTION

Ensure you connect the power cable to the power supply before connecting the power plug to a power outlet.

2. Connect a country-specific power cable to the power supply, and then connect the plug to a power outlet.

![Diagram of power cable connection]
CHAPTER 2
Setting up your SMART Document Camera

To connect your document camera to your computer
Connect the USB-B plug of your USB cable to your document camera, and then connect the USB-A plug to your computer.

Setup configurations for Camera view and SD Card view
After you complete the basic connection procedure (see page 9), you can connect your document camera to an external display. This enables you to use the document camera in Camera view and SD Card view (see page 19).

You can connect your computer and your document camera to different displays or they can share a display.
Connecting your document camera and computer to different displays
In this configuration your document camera images appear on one display, and your computer’s desktop appears on the other display. You can also access document camera images through SMART Notebook software on your computer.

<table>
<thead>
<tr>
<th>To connect your document camera and computer to different displays</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Complete the basic connection steps (see page 9).</td>
</tr>
<tr>
<td>2. Connect your computer or laptop to the projector of an interactive display.</td>
</tr>
</tbody>
</table>

**NOTE**
This is the normal configuration for using interactive whiteboards.

| 3. Connect your document camera to another external display (see page 13). |

Connecting your document camera and computer to a shared display
In this configuration your document camera is connected to your computer with both a USB and a VGA cable. Your document camera is connected to an external display.

<table>
<thead>
<tr>
<th>To connect your document camera and computer to a shared display</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Complete the basic connection steps (see page 9).</td>
</tr>
<tr>
<td>2. Connect your computer’s <strong>VGA Out</strong> port to your document camera’s <strong>VGA In</strong> port with a VGA cable.</td>
</tr>
<tr>
<td>3. Connect your document camera to an external display with a VGA cable (see page 13).</td>
</tr>
</tbody>
</table>

**NOTE**
DVI-D or composite video displays will not display your computer view. A VGA display is required.

This configuration makes it easy to transition from Computer view to Camera view or SD Card view using the same projector or display for all three views.
Connecting your document camera to an external display

You can connect your document camera directly to an external display to enable the following functions:

- Use Camera view to view the camera image in full-screen on the external display.
- Use SD Card view to view a full-screen slide show on the external display.
- Access the Camera view’s or SD Card view’s on-screen display menu.

Connecting to a projector or flat-panel display

You can connect your document camera to a projector or a display with the VGA cable.

⚠️ CAUTION

Ensure your projector or display is not connected to a power outlet when connecting it to your document camera.

To connect to a projector or display

1. Connect the VGA cable to the **VGA Out** connector on the back of your document camera.
2. Connect the other end of the VGA cable to the **VGA In** connector on your projector or display.

Switching between VGA DVI-D and Composite output

If you’re using a projector or computer display with a VGA or DVI-D cable, switch your document camera to VGA DVI-D mode. If you’re using a television with the Composite video cable, switch your document camera to Composite mode.

To switch to VGA DVI-D mode

Switch the **VGA DVI-D/Composite** switch on the side panel to **VGA DVI-D**.

To switch to composite mode

Switch the **VGA DVI-D/Composite** switch on the side panel to **Composite**.
Connecting to a digital projector or HD display with DVI-D
You can connect your document camera to a digital projector or high-definition display using a DVI-D single link cable.

⚠️ CAUTION
Ensure your digital projector or display is not connected to a power outlet when connecting it to your document camera.

💡 NOTES
- Don’t use a DVI-I or DVI-A cable.
- You can use a DVI-D dual link cable, but it will function as a single link DVI-D.
- If you connect your document camera directly to a projector or high-definition display with a DVI-D cable, you display only the camera image, and not your computer desktop or SMART Notebook presentation.

To connect to a digital projector or display
1. Connect a DVI cable from the **DVI-D Out** connector on your document camera to the **DVI-D In** connector of your digital projector or high-definition display.
2. Switch to VGA DVI-D mode (see page 13).

Connecting to a television
You can connect your document camera to a television with a Composite video cable.

⚠️ CAUTION
Ensure your television is not connected to a power outlet when connecting it to your document camera.

To connect to a television
1. Connect a Composite video cable from the **Composite Out** connector on your document camera to the **Video In** connector on your television.
2. Switch to Composite mode. See *Switching between VGA DVI-D and Composite output* on the previous page.
CHAPTER 2  
Setting up your SMART Document Camera

Switching between NTSC and PAL
When you connect your document camera to a television, switch it to your television’s encoding system (either NTSC or PAL).

To switch between NTSC and PAL
Switch the NTSC/PAL switch on the bottom of your document camera to NTSC if your television uses NTSC encoding, or to PAL if your television uses PAL encoding.

Setting output resolution
You can set your document camera’s output resolution to match the projector or display you’re using.

To set the output resolution
Set the SXGA/WXGA/720p/XGA switch to match the resolution of your display. Refer to the chart below to determine the output resolution you need.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Resolution</th>
</tr>
</thead>
<tbody>
<tr>
<td>SXGA</td>
<td>1280 × 1024</td>
</tr>
<tr>
<td>WXGA</td>
<td>1280 × 800</td>
</tr>
<tr>
<td>720p</td>
<td>1280 × 720</td>
</tr>
<tr>
<td>XGA</td>
<td>1024 × 768</td>
</tr>
</tbody>
</table>

Downloading software
Your document camera includes software downloads that you can use to create more effective presentations.

To install SMART Notebook software and SMART Product Drivers
1. Go to smarttech.com/software.
2. Scroll to SMART Notebook collaborative learning software.
3. Under Choose a version, select the latest version of SMART Notebook software for Windows® or Mac, and then follow the on-screen instructions.
To download and install Image Mate software
1. Visit the SMART download page at smarttech.com/software.
2. Scroll to Image Mate software for SMART Document Cameras.
3. Under Choose a version, select Image Mate 2.0 software for SMART Document Camera 330, and then follow the on-screen instructions.

Activating SMART Notebook 3D Tools and Mixed Reality Tools
SMART Notebook 3D Tools and Mixed Reality Tools provide an intuitive way for students and teachers to explore digital content with the SMART Document Camera.

When you connect your document camera to your computer, SMART Notebook 3D Tools and Mixed Reality Tools activate automatically. If you want to use SMART Notebook 3D Tools on a computer that has never been connected to a document camera, you can activate SMART Notebook 3D Tools by obtaining a product key and following the procedure below.

NOTE
You can obtain a product key for SMART Notebook 3D Tools by registering your document camera’s serial number at smarttech.com/register.

To activate SMART Notebook 3D Tools
1. For Windows operating systems, select Start > All Programs > SMART Technologies > SMART Tools > SMART Product Update.
   For Mac OS X operating system software, browse to and double-click Applications\SMART Technologies\SMART Tools\SMART Product Update.
   The SMART Product Update window appears.
2. Click Activate in the SMART Notebook row.
   The SMART Software Activation dialog box appears.
3. Click Add.
4. Type the product key you received from SMART in the Product Key box, and then click Add.
5. Click license agreement, review the license agreement, and then click Close.
6. If you accept the license agreement, select the I accept the terms in the license agreement check box.

7. Click Next.

    SMART Notebook 3D Tools activates.

8. Click Finish, and then close the SMART Product Update window.

Using your document camera with SMART Notebook software ......................... 24

Understanding Computer, Camera and SD Card views
You can use your SMART Document Camera in Computer, Camera and SD Card views. Each view enables you to do different things and requires a specific connection to either a display, projector or computer.

- Computer view
  Connect your document camera to your computer with the included USB 2.0 cable, and then set your document camera to Computer view to view document camera images only in SMART Notebook software.

  You can then save images to your SMART Notebook file for later presentation, or if your computer is connected to an interactive whiteboard, projector or television, you can deliver your SMART Notebook presentation with live images from your document camera.

  See Using your SMART Document Camera in Computer view on page 27.
- **Camera view**

  Connect your document camera to a projector or television, and then set your document camera to Camera view. You can then view full-screen images from your document camera using a projector or high-definition display, even without a computer. You can still view images through SMART Notebook software.

  You can use the Camera view on-screen display menu for greater control of the image, using Microscope mode, highlight boxes, screen masks and more.

  See *Using your SMART Document Camera in Camera view* on page 29.

- **SD Card view**

  Connect your document camera to a projector or television, place an SD or SDHC memory card in your document camera, and then set your document camera to SD Card view. You can then view full-screen images and slide shows from the memory card directly on a projector or high-definition display, even without a computer.

  You can use the SD Card view’s on-screen display menu for greater control of the image, using highlight boxes, screen masks and more.

  See *Using your SMART Document Camera in SD Card view* on page 43.

### Identifying view features

The following table describes the differences between each view:

<table>
<thead>
<tr>
<th>Feature description</th>

</tr>
</tbody>
</table>

Setting document camera views

- **To set Computer view**
  
  Press the Computer view button on the control panel. For more information, see page 27.

- **To set Camera view**
  
  Press the Camera view button on the control panel. For more information, see page 30.

- **To set SD Card view**
  
  Press the SD Card view button on the control panel. For more information, see *Setting your document camera to SD Card view* on page 43.

Performing basic operations

Use the following operations when your document camera is in any view.

**Positioning your document camera**

The camera arm unfolds and the camera head rotates so you can position your document camera to display objects.
CHAPTER 3
Using your SMART Document Camera

To unfold and position your document camera

1. Place a hand on the base of the document camera to stabilize it, and then pull the camera arm upward and forward.
2. Rotate the camera head and aim the lens at your subject.

Turning your document camera on and off

To turn your document camera on
Press the Power button on the control panel.
The power light turns from amber to flashing green. When the light becomes solid green, your document camera is operational.

To turn your document camera off
Press the Power button on the control panel.
The power light turns from green to amber.

Using the LED light
You can use the LED light on the camera head to illuminate your subject.

To turn the LED light on
Switch the LED light switch to the left. See Parts of the document camera on page 3.

⚠️ CAUTION
Do not stare into the lamp or shine the lamp directly into someone’s eyes. Turn the light off when displaying or capturing images of people.

Displaying printed documents
When you set your document camera to Computer view or Camera view, you can display printed documents, use the anti-glare sheet to reduce glare, optimize the image for text documents with Text modes and optimize the image for documents with graphics with Graphics modes.
CHAPTER 3
Using your SMART Document Camera

To display printed documents
1. Place your documents on the table.
2. Adjust the document camera and aim its lens at your documents.
3. Rotate the zoom dial to adjust the zoom magnification.
4. Press the Auto Focus button to adjust the focus.

To reduce glare with the anti-glare sheet
If glare makes it difficult for you to read printed documents that you’re displaying, place the anti-glare sheet on top of the printed materials.

To optimize the image for text documents
1. When your document camera is in Camera view, press Menu on the control panel.
   The on-screen display menu appears.
2. Select Image Setting, and then press Enter.
3. Select Image mode, and then press Enter.
4. Select either Text 1, Text 2 or Text 3, and then press Enter. See Camera view Image Settings on-screen display menu on page 32 for an explanation of the settings.

To optimize the image for documents with graphics
1. When your document camera is in Camera view, press Menu on the control panel.
   The on-screen display menu appears.
2. Select Image Setting, and then press Enter.
3. Select Image mode, and then press Enter.
4. Select either Graphics 1 or Graphics 2, and then press Enter. See Camera view Image Settings on-screen display menu on page 32 for an explanation of the settings.

Inserting and removing a memory card
Your document camera has a memory card slot, enabling you to save document camera images (when your document camera is in Computer view or Camera view) or to display previously captured images (when your document camera is in SD Card view).
CHAPTER 3
Using your SMART Document Camera

▲ CAUTION
Avoid static electricity near a memory card because it can damage the card.

To insert a memory card
1. Press the Camera view button on the control panel.
2. Insert a memory card into the card slot on the side panel.

♫ IMPORTANT
- Set your document camera to Application mode (see Setting USB-B Application mode on page 39) if you want to capture images to the memory card.
- Ensure the label on the memory card is facing up.

To remove a memory card
1. Press the Camera view button on the control panel and wait until your document camera displays a live image.
2. Push in the memory card to eject it, and then remove the card.

▲ CAUTION
To prevent memory card damage, do not remove the memory card while capturing or deleting images.

Using your document camera with SMART Notebook software
Your SMART Document Camera integrates with SMART Notebook software, enabling you to control your document camera from your computer or from a SMART Board interactive whiteboard or display. You can display objects, capture an image and your annotations on an image to a SMART Notebook page, zoom, focus and adjust brightness settings.

♫ NOTE
For information on using SMART Notebook 3D Tools and Mixed Reality Tools, see Using SMART Notebook 3D Tools and Mixed Reality Tools on page 51.
To open a SMART Document Camera window

1. Connect your SMART Document Camera to your computer and turn on the document camera.

2. Place the object or objects you want to display under the camera.

   
   A SMART Document Camera window appears.

   ![SMART Document Camera window](image)

   NOTE

   Alternatively, you can open the SMART Document Camera window by pressing Capture on the SMART Document Camera control panel.

4. Do any of the following:
   
   ○ Press Zoom In to zoom in.
   ○ Press Zoom Out to zoom out.
   ○ Press Increase Brightness to brighten the image.
   ○ Press Decrease Brightness to darken the image.
   ○ Press Focus In or Focus Out to change the focus manually.
   ○ Press Autofocus to change the focus automatically.

5. Press Close when you’re done.
CHAPTER 3
Using your SMART Document Camera

To convert the image
1. Open a SMART Document Camera window.
2. Press Additional Settings 🌃.
3. Do any of the following:
   ◦ Select Rotate 180 Degrees to rotate the image 180°.
   ◦ Select Convert to Color to convert a black and white image to color.
   ◦ Select Convert to Black and White to convert a color image to black and white.
   ◦ Select Convert to Positive to convert a negative image to positive.
   ◦ Select Convert to Negative to convert a positive image to negative.

To use Microscope mode
1. Open a SMART Document Camera window.
2. Press Additional Settings 🌃, and then select Start Microscope Mode.
3. When you’re done, press Additional Settings 🌃, and then select Stop Microscope Mode.

To take a screen capture
1. Open a SMART Document Camera window.
2. Press Capture and Close to insert a screen capture on the current page and close the window.
   OR
   Press Capture to New Page to insert a screen capture on a new page and keep the window open.

To take a series of screen captures
1. Open a SMART Document Camera window.
2. Press Capture with Time-Lapse, and then select a period of time. (For example, if you want to take a screen capture every 15 seconds, select 15 Seconds.)
3. Press when you’re done.
Chapter 4
Using your SMART Document Camera in Computer view

This view is for presenting images from your SMART Document Camera through your SMART Notebook software or Image Mate software. Connect your computer to both your document camera and your projector, and then set your document camera to Computer view.

The interactive whiteboard or projector displays your computer desktop or SMART Notebook file, and you can view or capture images from the camera.

Computer view is accessible in all computer, projector and document camera setup configurations.

Setting Computer view

**IMPORTANT**
Your document camera must be in Application mode. See Setting USB-B Application mode on page 39.

To set Computer view

1. Ensure your document camera is connected to your computer with the included USB 2.0 cable.
2. Ensure your computer is connected to a projector or a display.
3. Press the **Computer view** button on the control panel.
CHAPTER 4
Using your SMART Document Camera in Computer view

Using Computer view
Computer view enables you to bring images from your document camera into SMART Notebook software.

To use Computer view
Refer to Using your document camera with SMART Notebook software on page 24.
Chapter 5

Connect your SMART Document Camera to an external display to see a full-screen image from your document camera.

You can use your document camera in Camera view to perform the following tasks:

- Display objects
- Capture images to an SD or SDHC memory card
- Capture images to SMART Notebook or Image Mate software
- Use the features and settings in the on-screen display menu
CHAPTER 5
Using your SMART Document Camera in Camera view

- Use Microscope mode to use your document camera with a standard microscope eyepiece without additional adapters

Setting Camera view
Switch your document camera to Camera view to display images on a projector, flat-panel display or television.

**IMPORTANT**
Your document camera must be connected directly to an external display. See *Connecting your document camera to an external display* on page 13.

- **To switch to Camera view**
  1. Connect your document camera to a projector or flat-panel display with the appropriate cable (see *Connecting your document camera to an external display* on page 13).
  2. Press the Camera view button on the control panel.

- **To display objects**
  1. Press the Power button on the control panel.
  2. Press the Camera view button on the control panel.
  3. Place the object you want to display under the camera.
  4. Rotate the camera head to aim the lens at your subject.

- **To adjust the zoom magnification**
  Rotate the zoom dial on the camera head to increase or decrease the zoom magnification.

- **To automatically adjust the focus**
  Press the Auto Focus button on the camera head to automatically focus the image.

- **To adjust brightness settings**
  Press the Brighten or the Darken button on the control panel.
CHAPTER 5
Using your SMART Document Camera in Camera view

Using Microscope mode
The SMART Document Camera enables you to view the microscope stage through the document camera without additional attachments.

To display a microscope slide
1. Place a slide or object on the stage of the microscope.
2. Focus the microscope so that the subject is in sharp focus.
3. Position the microscope under your document camera so the camera lens is aligned with the microscope eyepiece.

⚠️ CAUTION
Ensure you do not hit your document camera lens with the microscope. This could damage your document camera’s lens.

4. Press the Camera view button on the control panel.
5. Press Menu on the control panel.
6. Select the Image Setting menu.
7. Use the up and down arrow buttons to select Microscope mode, and then press Enter.
8. Use the up and down arrow buttons to select On, and then press Enter.

Using the Camera view’s on-screen display menu
You use the on-screen display menu to adjust several settings for your document camera.

To open the Camera view’s on-screen display menu
1. Set your document camera to Camera view.
2. Press the Menu button on the control panel.
   The on-screen display menu appears.
3. Press the up and down arrow buttons on the control panel to navigate to a menu item.
4. Press the left and right arrow buttons to navigate forward or backward through menu items.
5. Press Enter to select a menu item.
6. To return to the previous menu level, use the down arrow button to navigate to Back, and then press Enter.

OR

To exit the menu, press Menu.

The following on-screen display menu options are available when your document camera is in Camera view:

<table>
<thead>
<tr>
<th>Menu</th>

</tr>
</tbody>
</table>

Using the highlight feature
When you use the highlight feature, a square in the center of the displayed image highlights your subject. You can change the size, transparency and position of the highlight square.

NOTE
The highlight feature is for display purposes only. If you capture an image while the highlight square is on, the image doesn't include the highlight.
To use the highlight feature

1. Display an object in Camera view, and then press Menu on the control panel. The on-screen display menu appears.
2. Press the up and down arrow buttons to select Special Tools, and then press Enter.
3. Use the up and down arrow buttons to select Highlight > Highlight On, and then press Enter.

Your document camera highlights a square in the center of the image and obscures the edges of the image.

To move the highlight square

Use the up, down, right and left arrow buttons to move the highlight square.

To change highlight transparency

1. Press Menu. The on-screen display menu appears.
2. Press the up and down arrow buttons to select Special Tools, and then press Enter.
3. Press the up and down arrow buttons to select Highlight On, and then press Enter.
4. Press the up and down arrows to select Highlight transparency.
5. Press Enter to save your settings.

To change the highlight area size

1. Press the Menu button on the control panel. The on-screen display menu appears.
2. Press the up and down arrow buttons to select Special Tools, and then press Enter.
3. Press the up and down arrow buttons to select Highlight, and then press Enter.
4. Select Adjust size, and then press Enter.
5. Press the up, down, left and right arrow buttons to change the highlight area size.
6. Press Enter to save your settings.

To turn off the highlight feature

Press Enter.
CHAPTER 5
Using your SMART Document Camera in Camera view

Using image masks
Image masks obscure most of the image. You can resize or move the mask to reveal more of the image.

NOTE
The image mask feature is for display purposes only. If you capture an image while the image mask is on, the image doesn't include the image mask.

To use an image mask
1. Display an object in Camera view, and then press Menu on the control panel. The on-screen display menu appears.
2. Press the up and down arrow buttons to select Special Tools, and then press Enter.
3. Press the up and down arrow buttons to select Mask on, and then press Enter.
   An image mask appears on the image.

To move the image mask
Press the up, down, right and left arrow buttons to move the mask area.

To change image mask transparency
1. Press Menu. The on-screen display menu appears.
2. Press the up and down arrow buttons to select Special Tools, and then press Enter.
3. Press the up and down arrow buttons to select Image Mask Transparency, and then press Enter.
4. Press the up and down arrows to select Adjust transparency.
5. Press Enter to save your settings.

To turn off an image mask
Press Enter.

Using the scroll feature
The scroll feature zooms in on the image and allows you to move the zoomed area with the arrow buttons.
CHAPTER 5
Using your SMART Document Camera in Camera view

NOTE
The scroll feature is for display purposes only. If you capture an image while the scroll is on, the captured image is the unscrolled image.

To display the scroll feature
1. Display an object in Camera view, and then press Menu on the control panel.
   The on-screen display menu appears.
2. Press the up and down arrow buttons to select Special Tools, and then press Enter ➔.
3. Press the up and down arrow buttons to select Scroll, and then press Enter ➔.
4. Press the up and down arrow buttons to select Scroll On, and then press Enter ➔.
   Your document camera displays a zoomed area of the image.

To move the zoomed scroll area
Use the up, down, right and left arrows to move the zoomed scroll area.

To change the scroll area magnification
When setting the scroll feature, select either ×2, ×3 or ×4, and then press Enter ➔.

Using the Picture in Picture (PiP) feature
The Picture in Picture (PiP) feature captures a temporary image from your document camera, and then displays it in one corner of the display. You can then change what is under the camera without the temporary image changing.

NOTE
The PiP feature is for display purposes only. If you capture an image while the PiP is on, the image doesn’t include the PiP.

To display the PiP image
1. Display an object in Camera view, and then press Menu on the control panel.
   The on-screen display menu appears.
2. Press the up and down arrow buttons to select Special Tools, and then press Enter ➔.
3. Press the up and down arrow buttons to select PiP, and then press Enter ➔.
   Your document camera displays a picture in picture image.
CHAPTER 5
Using your SMART Document Camera in Camera view

To move the PiP image
When displaying the PiP image, press the up, down, left and right arrow buttons on the control panel to move the image.

To turn off the PiP setting
Press Enter ← on the control panel.

</tr>
</tbody>
</table>

### Setting USB-B Application mode

To use your document camera with your computer, you must set it to Application mode in the Camera view on-screen display menu.

#### IMPORTANT

Your document camera must be in Camera view to set it to Application mode. It cannot be in Computer view or SD Card view.
CHAPTER 5
Using your SMART Document Camera in Camera view

To set your document camera to Application mode

1. Connect your document camera to a projector or flat-panel display with the VGA cable (see page 13).
2. Turn on your computer, and set it to Camera view.
3. Press Menu on the control panel.
   The on-screen display menu appears.
4. Press the up and down arrow buttons on the control panel to select Function Setting, and then press Enter.
5. Select USB-B mode, and then press Enter.
6. Select Application and then press Enter.

Setting USB-B SD Storage mode
This mode enables you to see the contents of your memory card from your computer.

To set SD Storage mode

1. Connect your document camera to a projector, flat-panel display or television (see page 13).
2. Press Menu on the control panel.
   The on-screen display menu appears.
3. Press the up and down arrow buttons on the control panel to select Function Setting, and then press Enter.
4. Select USB-B mode, and then press Enter.
5. Select SD Storage and then press Enter.

Saving images to a memory card
You can capture images to a memory card when your document camera is in Camera view.

Capturing images to a memory card

To capture images to a memory card

2. Position your document camera.
3. Make any camera settings you require using the Camera view’s on-screen display menu.

4. Press the Capture button on the document camera control panel.
   The camera capture icon appears, indicating that a photo is being taken.

   **IMPORTANT**

   If you do not see the camera capture icon, ensure your document camera’s USB-B mode is set to Application. See Setting USB-B Application mode on page 39.

**Transferring images from a memory card to your computer**

You can transfer images from a memory card to your computer.

**To transfer images to your computer**

1. Set your document camera to SD Storage mode. See Setting USB-B SD Storage mode on the previous page.

2. Connect your document camera to your computer with the USB cable (see Basic connection on page 9).
   Your computer recognizes your document camera and memory card as a removable disk.

3. Browse to the removable disk on your computer, and then transfer the images to your computer.
Chapter 6
Using your SMART Document Camera in SD Card view

Setting your document camera to SD Card view

To set SD Card view

1. Ensure your document camera is connected directly to a projector or another display. For connection information, see page 11.

2. Insert a memory card in your document camera.

3. Press the SD Card view button on the control panel.

When you set your SMART Document Camera to SD Card view, your document camera acts as an SD or SDHC memory card reader, displaying previously captured images either individually or as a slide show. Your computer isn’t used in an SD Card presentation.
Using the SD Card view display

To display images
1. Press the SD Card view button on the control panel.
2. Use the left and right arrow buttons on the control panel to scroll through images on the memory card.

To display and select thumbnail images
1. Press the SD Card view button on the control panel.
2. Press Enter to display up to 16 thumbnail-sized images.

To return to displaying single images
Press Enter to display a single image.

Using the SD Card view on-screen display menu
The SD Card view’s on-screen display’s menu enables you to use the document camera as a memory card reader.

SD Card view’s on-screen display menu options
The following on-screen display menu options are available when your document camera is in SD Card view.

<table>
<thead>
<tr>
<th>Menu</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>SD Settings</td>
<td>Delete, Lock, Unlock and Format Media. See Setting USB-B Application mode on page 39. Your document camera’s USB-B mode must be set to Application to see this menu. See SD Settings on-screen display menu on the next page.</td>
</tr>
<tr>
<td>Special Tools</td>
<td>Highlight, Mask and Scroll. See Special Tools on-screen display menu on page 48.</td>
</tr>
<tr>
<td>Slide Show</td>
<td>Start Slideshow, Interval, Select, Repeat and Order. See Slideshow Settings on-screen display menu on page 49.</td>
</tr>
</tbody>
</table>
CHAPTER 6
Using your SMART Document Camera in SD Card view

SD Settings on-screen display menu

To access the SD Settings menu

Select SD Card view > Menu > SD Settings.

IMPORTANT

The SD Settings are available only if you have your document camera set to Application mode in the Camera view on-screen display menu. See Setting USB-B Application mode on page 39.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
Deleting images from a memory card

You can delete images from a memory card in your document camera using the on-screen display menu.

**IMPORTANT**

- Your document camera must be set to Application mode. See Setting USB-B Application mode on page 39.
- You are unable to delete images from your computer, only from the document camera’s memory card.

To delete images

1. Press the SD Card view button on the control panel.
   You see the current saved image from the memory card.

2. Use the left and right arrow buttons on the control panel to select the image you want to delete.

3. Press Menu on the control panel.
   The on-screen display menu appears.

4. Select SD, and then press Enter.

5. Select Delete, and then press Enter.

6. Select Current, and then press Enter to delete the current image.
   OR
   Select All, and then press Enter to delete all images in the viewed folder.
   The deleting image icon displays briefly while your document camera deletes images.

Locking and unlocking images

You can lock images to include them in slideshows set to Select > Lock in the Slideshow menu.

**IMPORTANT**

If you are unable to access the SD Menu, you must set your document camera’s USB-B mode to Application. This is a Camera view menu setting. See Setting USB-B Application mode on page 39.
CHAPTER 6
Using your SMART Document Camera in SD Card view

To lock images for a slideshow

1. Press the SD Card view button on the control panel.
2. Use the arrow buttons on the control panel to select the image you want to lock, and then press the Menu button.
   The on-screen display menu appears.
3. Select SD > Lock, and then press Enter.
4. Select Current, and then press Enter.

OR

Select All to lock all images.
Repeat steps 1 to 3 to lock other images for your slideshow.

To unlock images for a slideshow

1. In SD Card view, use the arrow buttons on the control panel to select the image you want to unlock, and press the Menu button.
   The on-screen display menu appears.
2. Select SD > Unlock, and then press Enter.
3. Select Current, and then press Enter.

OR

Select All to unlock all images.
Repeat steps 1 to 3 to unlock other images for your slideshow.
Special Tools on-screen display menu

To access the Special Tools menu

Select **SD Card view > Menu > Special Tools**

<table>
<thead>
<tr>
<th>Special Tools menu options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Highlight</strong></td>
<td></td>
</tr>
<tr>
<td>- Highlight On</td>
<td>Highlights a center square on the displayed image</td>
</tr>
<tr>
<td>- Adjust Transparency</td>
<td></td>
</tr>
<tr>
<td>- Adjust Size</td>
<td></td>
</tr>
<tr>
<td><strong>Mask</strong></td>
<td></td>

</tr>
</tbody>
</table>

The SD Card view’s Special Tools menu includes the same tools as the Camera view’s Special Tools menu, except that the SD Card view doesn’t have the Picture in Picture (PiP) feature.

- For information on how to use the Highlight feature, see *Using the highlight feature* on page 34.
- For information on how to use the Mask feature, see *Using image masks* on page 36.
- For information on how to use the Scroll feature, see *Using the scroll feature* on page 36.
CHAPTER 6
Using your SMART Document Camera in SD Card view

Slideshow Settings on-screen display menu

To access the Slideshow Settings menu

Select SD Card view > Menu > Slideshow.

<table>
<thead>
<tr>
<th>Slideshow menu options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ] Start Slideshow</td>
<td>Starts a slideshow of images</td>
</tr>
<tr>
<td>[ ] Interval</td>
<td>Sets image interval to 5 seconds</td>
</tr>
<tr>
<td>- 5 sec</td>
<td>Sets image interval to 10 seconds</td>
</tr>
<tr>
<td>- 10 sec</td>
<td>Sets image interval to 15 seconds</td>
</tr>
<tr>
<td>- 15 sec</td>
<td>Sets image interval to 30 seconds</td>
</tr>
<tr>
<td>[ ] Select</td>
<td>Selects all images for slideshow</td>
</tr>
<tr>
<td>- All</td>
<td>Sets so only locked images display in a slideshow</td>
</tr>
<tr>
<td>[ ] Repeat</td>
<td>Turns off slideshow repeat</td>
</tr>
<tr>
<td>- Off</td>
<td>Turns on slideshow repeat</td>
</tr>
<tr>
<td>[ ] Order</td>
<td>Sets slideshow order to forward</td>
</tr>
<tr>
<td>- Forward</td>
<td>Sets slideshow order to backward</td>
</tr>
</tbody>
</table>

Showing slideshows

To start a slideshow

1. Access the Slideshow menu.
2. Select Slideshow, and then press Enter.

Your document camera displays a slideshow of images on the memory card.

To stop a slideshow

Press Enter or any of the arrow buttons on the control panel.

The image slideshow stops and the on-screen display menu appears.
CHAPTER 6
Using your SMART Document Camera in SD Card view

Displaying specific images in a slideshow
You can set your document camera to display only images that you select.

☑ To set SD settings to display selected images only
  1. In SD Card view, press Menu on the control panel.
     The on-screen display menu appears.
  2. Select Slideshow > Select, and then press Enter ←.
  3. Select Lock, and then press Enter ← so that only locked images display in a slideshow.

⚠️ IMPORTANT
When you set the slideshow to Lock, it will include only images that are locked. You lock images in the SD Card view’s SD menu, not the Slideshow menu.

☑ To lock images
See Locking and unlocking images on page 46.

☑ To unlock images
See Locking and unlocking images on page 46.

Your SMART Document Camera can transform any classroom or lecture hall into a spontaneous and interactive learning environment. It uses a high-resolution video camera to display clear and detailed images of written material or any physical object.

SMART Notebook 3D Tools and Mixed Reality Tools take this experience to a new level by providing teachers and students with a new way to engage with digital 3D content.

This chapter provides the information you need to begin using SMART Notebook 3D Tools and Mixed Reality Tools with your SMART Document Camera as well as SketchUp™ sketching software and Google™ 3D Warehouse.
SMART Notebook 3D Tools and Mixed Reality Tools provide an intuitive way for students and teachers to explore digital content with the document camera. This technology is integrated with SMART Notebook software.

Incorporating 3D content into your lessons
You can incorporate 3D content into your SMART Notebook software lessons. The following are examples of how to do this:

• If you’re teaching a biology lesson, insert a 3D model of a heart into your .notebook file. Rotate and change the size of the 3D model to present the different parts of the heart.

• If you’re teaching an English lesson, insert a 3D model of a city that is referenced in a novel the class is reading. Enter the 3D scene to navigate streets and interiors of buildings.

• If you’re teaching a primary lesson, insert multiple 3D models and use the Disguise feature to reveal answers as a memory exercise.

Getting started

Hardware and software requirements
To get started with Mixed Reality Tools, you need the following:

• SMART Notebook software 11
• SMART Document Camera 330
• A mixed reality cube
• A Windows computer meeting the following requirements:
  ○ Pentium® 4 processor or better
  ○ 512 MB of RAM (1 GB recommended)
  ○ 2 GB of free hard disk space
  ○ Windows XP SP3, Windows Vista® SP2 or Windows 7 operating system
  ○ DirectX® 9 compatible graphics hardware
A Mac computer meeting the following requirements:
  - 1.5 GHz Intel® processor or better
  - 1 GB of RAM
  - 1 GB of free hard disk space for minimum installation (2 GB for full installation with Gallery collections)
  - Mac OS X 10.6 operating system software or later

**Lighting requirements**
Mixed Reality Tools works best in a bright room where the work surface doesn’t have any noticeable shadows or glare.

The light must be as uniform as possible, shining on the cube and background. You can achieve this by setting up the document camera so that the camera is facing directly down, perpendicular to a uniform, neutral work surface. The work surface should not be darker than the black elements on the mixed reality cube or lighter than the white elements on the cube.

**NOTES**
- In very bright rooms, the work surface can appear whiter than the white elements on the cube.
- You can print a mixed reality mat and place it under the document camera to increase contrast between the cube and the background (see Using the mixed reality mat below).

A typical projector room is usually quite dark. For Mixed Reality Tools to work properly, the document camera’s light should be turned on. Don’t manipulate the cube more than 14” (35 cm) from the document camera.

**NOTE**
If SMART Notebook software doesn’t enter Mixed Reality mode when you hold the cube under the camera, shake the cube under the camera. If the issue persists, press and hold the brighten button on the document camera to maximize the brightness.

**Using the mixed reality mat**
To increase the contrast between the mixed reality cube and background, you can use the mixed reality mat available from the SMART Support website. The mat includes marks that indicate the area in which you can move the cube while in Mixed Reality mode.
CHAPTER 7
Using SMART Notebook 3D Tools and Mixed Reality Tools

To print the mixed reality mat, you need the following items:

- A computer with Internet access and Adobe® Reader® or Acrobat® software.
- A printer
- Tape

To print the mixed reality mat

1. Open the appropriate mixed reality mat file in Adobe Reader or Acrobat.

<table>
<thead>
<tr>
<th>Region</th>
<th>Page size</th>
<th>Link</th>
</tr>
</thead>
<tbody>
<tr>
<td>U.S. and Canada</td>
<td>Letter (8 1/2&quot; × 11&quot;)</td>
<td>smarttech.com/kb/160487</td>
</tr>
<tr>
<td>Elsewhere</td>
<td>A4</td>
<td>smarttech.com/kb/160488</td>
</tr>
</tbody>
</table>

2. Select File > Print.
   The Print dialog box appears.

3. Select None in the Page Scaling drop-down list, clear the Auto-Rotate and Center check box, and then press OK.

4. Arrange the pages:
   - Page 1 is top left.
   - Page 2 is top right.
   - Page 3 is bottom left.
   - Page 4 is bottom right.

   Set page 1 as the bottom page in your stack.

5. Overlap, orient and align the pages according to the guidelines, and then tape the pages together.

   **NOTE**
   Due to different page sizes and printing options, your pages may not align perfectly onto the guidelines. If that is the case, align the pages to the central crosshairs.

   **TIPS**
   - Use a light table or a tablet device set to a white background as an aid when aligning the pages.
   - To make the mat last longer, consider printing it on heavy cardstock.
To use the mixed reality mat

1. Place the mixed reality mat on your work surface.

2. Place the document camera over the darkened area on the mat.

3. Rotate the bottom arm of the document camera so that it’s 90° from your work surface.

4. Rotate the upper arm of the document camera upward until it’s at its highest spot, ensuring the bottom arm is still set to 90°.
5. Turn on the document camera.

**NOTES**
- The document camera image should show the target area in the center. You can adjust the mat slightly if necessary.
- The lines on the mat indicate where you can position the mixed reality cube while in Mixed Reality mode (see *Manipulating 3D models using Mixed Reality Tools* on page 62).

**Inserting and manipulating 3D models**

To use SMART Notebook 3D Tools software, you need to insert a 3D model in your .notebook file. After you insert a 3D model, you can manipulate it in the same way you manipulate other objects in SMART Notebook software.

**NOTE**
You can insert 2D images and 3D models on the same page and manipulate them the same way you manipulate other objects in SMART Notebook software.

**Inserting 3D models**

3D models are available from the 3D Objects folder in Lesson Activity Examples and the SMART Exchange™ website (exchange.smarttech.com) as well as the Google 3D Warehouse (see *Using Google 3D Warehouse* on page 66). You can also insert your own 3D models if they are in one of the following formats:

- COLLADA (.dae)
- 3D Object (.obj)
- FBX (.fbx)

**NOTE**
Textures and other information for some 3D models are stored in separate files and folders. When you insert these 3D models, ensure the 3D model file is located in the correct folder structure with the supporting files and folders.

**To insert a 3D model**

1. Select Insert > 3D File.

   The Insert 3D File dialog box appears.
2. Browse to and select the 3D model you want to insert.

3. Press Open.

   The 3D model appears on the page.

**Manipulating 3D models**

After inserting a 3D model, you can manipulate it in the same way you manipulate other objects in SMART Notebook software. In particular, you can do the following:

- Cut, copy and paste
- Clone
- Move
- Scale
- Lock
- Attach links and sounds
- Add to the Gallery tab

**NOTES**

- For information on these basic options, see the Help for SMART Notebook software.
- When you add a 3D model to the Gallery tab, it appears in the **3D Objects** category.

In addition to these basic options, you can do the following:

- Rotate the 3D model
- Pause, resume, play and restart animation
- Add labels

**Rotating a 3D model**

You can rotate a 3D model along multiple axes. After rotating a 3D model, you can reset it to its original orientation.

**To rotate a 3D model along a single axis**

1. Select the 3D model.
2. Press and hold one of the side rotation handles.
3. Drag your finger around the center of the 3D model, and then release your finger when done.

To rotate a 3D model along multiple axes
1. Select the 3D model.
2. Press and hold the center rotation handle.
3. Drag your finger in the direction you want to rotate the 3D model, and then release your finger when done.

To reset a 3D model to its original orientation
1. Select the 3D model.
2. Press the 3D model’s menu arrow, and then select Reset Rotation.

Pausing, playing and restarting animation
If a 3D model contains animation, you can pause, resume and restart the animation.

NOTE
If a 3D model doesn’t contain animation, the Animation menu documented in the following procedures is disabled.

To pause animation
1. Select the 3D model.
2. Press the 3D model’s menu arrow, and then select Animation > Play/Pause Animation.

To resume playing animation
1. Select the 3D model.
2. Press the 3D model’s menu arrow, and then select Animation > Play/Pause Animation.

To restart animation
1. Select the 3D model.
2. Press the 3D model’s menu arrow, and then select Animation > Restart Animation.
Adding labels
You can use labels to highlight different components of a 3D model. Labels can be text, shapes or other 2D objects.

To add a label
1. Select the 3D model.
2. Right-click the 3D model where you want to connect the label, and then select Add Label.
   A label appears.
3. To use text in the label, double-click the label's default text and then type your own text.
   OR
   To use a shape or other 2D object in the label, create the object and then drag it into the label.
4. Optionally, drag the label’s connection point to a different location on the 3D model.

To hide and display a label
1. Press the label’s connection point on the 3D model.

   The label is hidden.
2. Press the label’s connection point to display the label.

To remove a label
1. Select the label.
2. Press Close.
Navigating 3D scenes
Large 3D models that contain internal details are called 3D scenes. You can navigate 3D scenes using controls in SMART Notebook software.

**NOTES**
- You can use the navigation controls to navigate any 3D model. However, not all 3D models contain internal details. If you enter a 3D model that doesn’t contain internal details, the interior appears empty or dark.
- If you’re using Mac OS X operating system software, you’re unable to enter a 3D scene while in Full Screen mode. To enter a 3D scene, first exit Full Screen mode and then complete the following procedure.

**To navigate a 3D scene**

1. Select a 3D model.
2. Press the 3D model’s menu arrow, and then select **Enter 3D Scene**.
   SMART Notebook software displays the 3D scene in Full Screen mode. A map of the 3D scene, navigation controls and the Close button appear.

**TIPS**
- You can press the gray border of the map to drag it to another area of the page if it’s covering materials you want to present. You can also resize the map by pressing and dragging the gray border in the lower-right corner.
- You can press the gray background or center icon of a navigation control to drag it to another area of the page if it’s covering materials you want to present.
3. Navigate the 3D scene using the navigation controls.

<table>
<thead>
<tr>
<th>Button</th>
<th>Use to:</th>

<td>Close</td>
</tr>
</tbody>
</table>

**NOTE**

As you navigate the 3D scene, a red indicator in the map displays where you are in the scene and the direction you are viewing. The arrow in the center indicates orientation. The arrow becomes a circle when you’re facing directly up or down.

4. Press Close when you’re done.

---

**Using Mixed Reality Tools**

After inserting 3D models in your .notebook files using SMART Notebook 3D Tools, you can manipulate those models using Mixed Reality Tools.

**Manipulating 3D models using Mixed Reality Tools**

You manipulate 3D models using your SMART Document Camera and the mixed reality cube.

■ **To manipulate a 3D model using the mixed reality cube**

1. Connect your SMART Document Camera to your computer and turn on the document camera.
2. Open the .notebook file, and then display the page containing the 3D model.
3. Place the mixed reality cube under the SMART Document Camera, showing one side of the cube to the camera.

SMART Notebook software enters Mixed Reality mode and assigns the 3D model to the cube. If there is more than one 3D model on the page, move the cube until the animation on the page indicates that the cube is connected to the 3D model you want to manipulate.

NOTE

SMART Notebook software enters Mixed Reality mode in this situation only if a 3D model is on the page. Alternatively, you can enter Mixed Reality mode by pressing SMART Document Camera in the toolbar, and then pressing Start Mixed Reality in the SMART Document Camera window.
CHAPTER 7
Using SMART Notebook 3D Tools and Mixed Reality Tools

4. Do any of the following:
   - To move the 3D model on the screen, move the cube.
   - To rotate the 3D model on the screen, rotate the cube in your hand.
   - To unassign the 3D model from the cube, cover the cube’s markings with your hand.

**NOTE**
If you experience any of the following symptoms, the cause may be issues with tracking:
   - The 3D model doesn’t connect to the cube.
   - The 3D model shakes when it’s connected to the cube.
   - The 3D model sporadically disconnects from the cube.
   - SMART Notebook software enters Mixed Reality mode when the cube is under the camera even if you aren’t moving the cube.

To address tracking issues, see Lighting requirements on page 53.

**TIPS**
   - As you move and rotate the cube in your hand, ensure you don’t cover the symbols on the cube’s surface.
   - To hide the image from the SMART Document Camera and show only the 3D model, move the transparency slider to the left.

5. If you’ve purchased a second cube from SMART and there is more than one 3D model on the page, manipulate another 3D model by completing steps 3 and 4 with the other cube.

**NOTE**
The two cubes must have different patterns if you want to use them both at the same time.

6. When you’re done, move the cube (or cubes) away from the camera.
   SMART Notebook software exits Mixed Reality mode after a few seconds.

Disguising 3D models before presenting them
If you want to hide 3D models in your .notebook file before presenting them, you can use the Disguise feature to hide the 3D models with a magic hat.

When you use Mixed Reality Tools, the magic hat disappears after Mixed Reality Tools assigns the 3D model to the cube, revealing the 3D model.
### NOTE

If you hide multiple 3D models on the same page with magic hats, each magic hat has a different colored ribbon.

#### To hide a 3D model with a magic hat

1. Select the 3D model.
2. Press the 3D model’s menu arrow, and then select Disguise > Disguised.

#### To change the magic hat's color

1. Select the magic hat.
2. Press the magic hat’s menu arrow, and then select Disguise > Change Color.

#### To reveal a 3D model under a magic hat

Use Mixed Reality Tools as described in *Manipulating 3D models using Mixed Reality Tools* on page 62.

After Mixed Reality Tools assigns the 3D model to the cube, stars swirl around the magic hat, and then the magic hat disappears, revealing the 3D model behind it.

### TIP

You can also reveal the 3D model by pressing the hat 🧢 icon in the lower-left corner.

---

**Using SketchUp sketching software and Google 3D Warehouse**

Google offers two 3D tools that you can use with SMART Notebook 3D Tools and Mixed Reality Tools:

- SketchUp sketching software
- Google 3D Warehouse

**Using SketchUp sketching software**

You can use SketchUp sketching software to create 3D models. You can save these 3D models in COLLADA (.dae) format and then insert them in SMART Notebook software.
To save a 3D model in .dae format

1. Open the 3D model in SketchUp sketching software.
2. Select File > Export > 3D Model.

The Export Model dialog box appears.
3. Browse to where you want to save the file.
4. Type a name for the file in the File name box.
5. Select COLLADA File (*.dae) in the Export type drop-down list.
6. Press Export.

To insert the 3D model in SMART Notebook software

See Inserting 3D models on page 56.

Using Google 3D Warehouse

Google 3D Warehouse is an online repository of 3D models. The Gallery tab in SMART Notebook software includes a link to Google 3D Warehouse. Using this link, you can search for 3D models and download them to your computer. You can then insert the 3D models into your .notebook files.

To download 3D models from Google 3D Warehouse

1. Press the Gallery 📀 tab.
2. Press Google 3D Warehouse.

Google 3D Warehouse appears in the bottom section of the Gallery tab.
3. Search or browse for a 3D model that you want to download.

Select the model.
4. Press Download Model, and then press the Download link beside Collada (.zip).

NOTES

- When you first download a 3D model, Google 3D Warehouse could prompt you for a nickname.
- If you’re using Mac OS X operating system software and you cancel the download, the 3D model still saves to the Downloads folder.

5. Save the .zip file to your computer.
6. Extract the contents of the .zip file to a folder on your computer.
To insert a 3D model downloaded from Google 3D Warehouse

See Inserting 3D models on page 56.
This chapter includes troubleshooting information for your SMART Document Camera.

### Document camera issues

Use the following table to troubleshoot issues with your document camera.

<table>
<thead>
<tr>
<th>Issue</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>No image displays.</td>
<td>• Turn off your document camera (see page 22). Securely connect all cables and connect the camera’s AC adapter to a power outlet. Turn on your document camera.</td>
</tr>
<tr>
<td></td>
<td>• Adjust the zoom dial. The camera may be on a blank section of your document.</td>
</tr>
<tr>
<td></td>
<td>• Ensure the output switches on the side panel are set to the proper image output:</td>
</tr>
<tr>
<td></td>
<td>○ VGA DVI-D or Composite on the side panel</td>
</tr>
<tr>
<td></td>
<td>○ NTSC or PAL on the bottom of your document camera</td>
</tr>
<tr>
<td>No image displays after you restart your computer when your document camera is connected through a USB hub.</td>
<td>1. Turn off your document camera, and then wait several seconds.</td>
</tr>
<tr>
<td></td>
<td>2. Turn on your document camera again.</td>
</tr>
<tr>
<td>The image is out of focus.</td>
<td>• Press the <strong>Auto Focus</strong> button.</td>
</tr>
<tr>
<td></td>
<td>• Use the manual focus.</td>
</tr>
<tr>
<td></td>
<td>• Move the camera further away from the object.</td>
</tr>
</tbody>
</table>
| The image is scrambled or black and white when a television is the display device.       | Ensure the NTSC/PAL switch on the bottom of the document camera is set correctly. See *Switching between NTSC and PAL* on page 15.
<table>
<thead>
<tr>
<th>Issue</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The image is too dark.</td>
<td>- Press the brightness buttons on your document camera.</td>
</tr>
<tr>
<td></td>
<td>- If the object isn’t well lit, turn on your document camera LED.</td>
</tr>
<tr>
<td></td>
<td>- Adjust the shutter speed. See <a href="#">Camera view Image Settings on-screen display menu</a> on page 32.</td>
</tr>
<tr>
<td>The image is broken apart by lines.</td>
<td>- Adjust the distance between the object and the camera.</td>
</tr>
<tr>
<td></td>
<td>- Adjust your projector settings.</td>
</tr>
<tr>
<td></td>
<td>2. Press <strong>Additional Settings</strong> 🕒, and then clear the selection of</td>
</tr>
<tr>
<td></td>
<td><strong>Automatically Start Mixed Reality Tools</strong>.</td>
</tr>
<tr>
<td></td>
<td><strong>NOTE</strong></td>

Appendix A

Hardware environmental compliance

SMART Technologies supports global efforts to ensure that electronic equipment is manufactured, sold and disposed of in a safe and environmentally friendly manner.

Waste Electrical and Electronic Equipment regulations (WEEE directive)

Waste Electrical and Electronic Equipment regulations apply to all electrical and electronic equipment sold within the European Union.

When you dispose of any electrical or electronic equipment, including SMART Technologies products, we strongly encourage you to properly recycle the electronic product when it has reached the end of its life. If you require further information, please contact your reseller or SMART Technologies for information on which recycling agency to contact.

Restriction of Certain Hazardous Substances (RoHS directive)

This product meets the requirements of the European Union’s Restriction of Certain Hazardous Substances (RoHS) directive 2002/95/EC.

Consequently, this product also complies with other regulations that have arisen in various geographical areas, and that reference the European Union’s RoHS directive.

Packaging

Many countries have regulations restricting the use of certain heavy metals in product packaging. The packaging used by SMART Technologies to ship products complies with applicable packaging laws.
China’s Electronic Information Products regulations

China regulates products that are classified as EIP (Electronic Information Products). SMART Technologies products fall under this classification and meet the requirements for China’s EIP regulations.
