

SMART Hub VE

With SMART Hub VE connected to a SMART Board interactive whiteboard or display, you can do the following:

- Have a quick brainstorming meeting, save your notes to a USB key or send them out by e-mail – without using a computer
- Walk in the room and start whiteboarding – the appliance is always ready to go
- Access additional digital documents by attaching a laptop or USB key
- Save work in familiar file formats, such as PDF and JPEG

As a collaboration appliance, SMART Hub VE brings your meetings into the digital age without the need for a dedicated meeting room computer.

Connect SMART Hub VE to a projector and a SMART Board™ interactive whiteboard or interactive display to experience computer-free digital whiteboarding on a large workspace. You can write notes in digital ink, share materials and save work to a USB key or distribute them by e-mail. SMART Hub VE also gives you the flexibility to add a laptop or plug in a USB key to access additional files.

Instant productivity

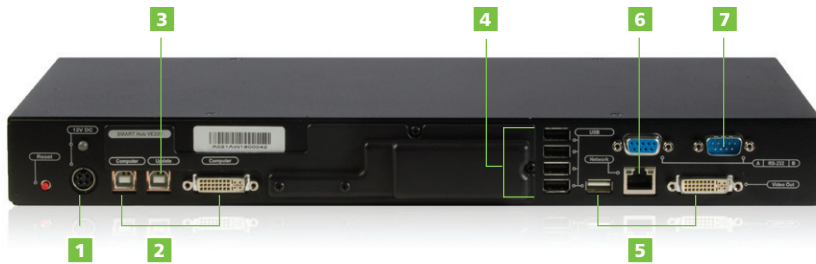

SMART Hub VE is easy to use and always ready to go. You don't have to turn it on or enter passwords, and its intuitive interface enables you to be instantly productive. Just walk up to the interactive whiteboard or display, pick up a pen and begin writing. This appliance is designed to be low maintenance, and no digital whiteboarding experience is necessary.

Meetings are more efficient and productive with SMART Hub VE, because it saves meeting participants from having to transcribe notes from a flip chart or dry-erase board. Notes can easily be saved to a USB key or e-mailed using the appliance's built-in e-mail server.

Meeting flexibility

With SMART Hub VE, there's no need for a dedicated meeting room computer, but this appliance still gives you the ability to access additional documents. Simply attach your laptop or plug a USB key into the appliance to share information with your team.

And if your meeting needs change, it's an easy software upgrade to SMART Hub SE, a collaboration platform that allows you to collaborate at a distance and connect to multimedia devices.

- 1** Power source
- 2** Computer connections (USB and DVI-I)
- 3** USB B port for firmware updates
- 4** USB A ports for storage devices, keyboard, and mouse
- 5** SMART product input and display controller
- 6** Network
- 7** Projector control

Key features

- Enables computer-free whiteboarding – teams can write notes in digital ink and save them to a USB key
- Includes a built-in e-mail server, so teams can quickly send out meeting notes without using a computer
- Works with SMART Board interactive whiteboards and SMART Board interactive displays
- Offers a simplified interface, so teams can be instantly productive with minimal training
- Enables teams to share additional resources or documents from any laptop by connecting to it with a VGA cable
- Mounts behind a SMART Board or interactive display, keeping it out of sight
- Connects to a network for automatic firmware updates, ensuring compatibility with future SMART products
- Offers the option to easily upgrade to SMART Hub SE without having to purchase new hardware
